Vladilen Kozin

Clojure(Script), Racket, Emacs Lisp, Redex, JavaScript, OMeta, meta-programming Fall*13 Recurse Center (aka Hacker School) alum

	Corporate ladder
Apr-Nov 2017	Senior Programmer at Droit (London, UK)
	Same as before but with obligatory daily commute. Programmer/Consultant at Droit (New York, USA - remote)
2015-2017	Building an expert system for compliant trading. Sneaking Clojure(Script) into unsuspecting
	financial giants. On any given day I could be designing DSLs, implementing compilers, parsers, rule-based engines, putting together simple browser-based GUIs and whatever el- the startup life would have me do. Programmer at Yandex (Moscow, Russia).
2014-2013	Programmer at allowing (woodow, russea). Officially a member of Search Interfaces Development Infrastructure group, but mostly I wrote backend tools for source to source compilation - engines to write your template engines. If were lucky and did it right frontend developers would get to use my work and take all the credit.
2009-2011	take all the credit. Equity Derivatives & Structured Products Salesat Renaissance Capital (Moscow, Russia). EM Structured Solutions and Derivatives Salesat Barclays Capital (London, UK).
	EM Structured Solutions and Derivatives Sales at Barclays Capital (London, UK). Projects
Emacs Lisp	Author of multi-el - all things multiple dispatch for Emacs Lisp: type driven dispatch with protocols, ad-hoc polymorphism with multi-methods, pattern-matching and destructuring without noise with multi-patterns, case-dispatch with multi-defuns, benchmarking with multi- benchmarks.
Racket	Author of prelude that extends Racket with generic associative API, Lua-style meta-tables prototypal inheritance and more.
	Author of ponzi - the beginnings of a clever Scheme for a discerning smart contract builder WIP but it does implement the Ethereum Virtual Machine close enough to the Yellow Paper
	Author of ormeta-racket, a mostly complete Racket implementation of OMeta - OD pattern- matching language that extends PEGs with ability to handle left-recursive rules and match structured data.
	Author of skish, a mostly futile attempt at porting Olin Shivers' wonderfulsosh to Racket. sosh is a non-interactive Unix shell embedded within Scheme (originally Scheme48).
Clojure	Contributor to Racket the language. Author of Several closed-source products: FpML message parser, financial derivatives classifier based on ISDA taxonomies, legal annotation tools, PDF and XML content extracts and transformation tools.
	Author of bot - a crypto-currency arbitrager that could talk to several exchanges including Biffinex and GDAX. It uses Clojure Spec to parse and validate protocol messages and aleg for async communication and concurrency.
	Author of playrum - just getting the taste for React in ClojureScript.
	Contributor to seqexp, regular expressions for Clojure sequences.
JavaScript	Author of bemintmi-syntax, a syntax converter for BEMHTML - an XSLT inspired templating language - part of BEM methodology of frontend development.
	Author of bemintmi-source-convert, a best effort compiler from BEMHTML templates to BH templates.
	Author of xist-more, an XJST-based compiler for BEMHTML templates that facilitates incremental compilation of templates potentially on the Client, WIP.
	Author of xipt-more, an XJST-based compiler for BEMHTML templates that facilitates incremental compilation of templates potentially on the Client. WIP. Contributor to ometa-js, a JavaScript implementation of CIMeta.
	Contributor to ometa-js, a JavaScript implementation of OMeta.
2004-2008	Contributor to ometa-js, a JavaScript implementation of OMeta. Contributor to bern-xjst, XJST-based compiler for BEMHTML templates.
2004-2006	Contributor to ometa-js, a JavaScript implementation of CMeta. Contributor to bern-jet, XJST-based compiler for BEMHTML templates. Formal education Keldysh institute of Applied Mathematics/Moscow, Russia)
2004–2008	Contributor to ometa-js, a JavaScript Implementation of OMeta. Contributor to bern-spit. XJST-based compiler for BEMHTML templates. Formal education Kadigah beritatus of Applied Mathematics (Moscow, Russia) Phot tack in Applied Mathematics, dropped out New Economic School (Moscow, Russia)
2004-2008 2004 1999-2004	Contributor to ometa-js, a JavaScript Implementation of OMeta. Contributor to bern-spit. XJST-based compiler for BEMHTML templates. Activities and interests

Most of my achievant and interest these days involve boxes with lights and buttons. Even so there were reports of me cycling, bouldering, surfing, roller-skalting, skiing and more. Having owned a sports carl'Il choose a betylere every time.

Lived in the LIK, US, Hungsay, Spain and far more exotic places. Crossed the US from Mexico to Canada twice with the current state count of 19.
